

Installation Instructions

19489 / 21739

This installation guide applies to both the wooden tray version and the plastic tray version.
Due to the material and storage design, surface friction may occur when removing or storing the steering wheel tray.

1. Pass the top strap of the Panel around the headrest and fasten the buckle. Pass the bottom strap around the seat and fasten the buckle. Lift the silver pin to release the folding tray.

2. Pull out the support rods on both sides of the Panel. If the support rods cannot be removed easily, push the nuts outward from the inside of the panel with your other hand. Then pull the support rods into the slots on both sides of the tray. Select the appropriate groove according to the seatback angle to keep the tray level.

3. Remove the steering wheel tray. Push the tray upward from the bottom, then pull it out.

4. Snap the steering wheel tray onto the steering wheel at the desired angle.

5. Make sure the steering wheel tray is firmly installed and does not move or fall. The tray has two usable sides: the grooved side helps prevent food or items from sliding off, while the smooth side provides a stable surface for electronic devices.

6. Store the steering wheel tray. Insert the steering wheel tray into the inner groove, then press it down to secure it.
